PROFESSIONAL SUMMARY

AI Security Engineer with 4 years in security operations, building AI agents that securely connect log and data sources for automated reviews with severity context, backed by a success measurement strategy. Scaled review coverage 12x, from 500 to 6,000+ emails/day, while cutting analyst triage times from ~5 hours to 15-minute runs.

TECHNICAL SKILLS

AI & Automation: Claude Code, Claude, Gemini, MCP servers, API connectors, iPaaS automation, agentic workflows, prompt engineering, evals, HITL review, AI success measurement, guardrails.

SaaS & Cloud: Splunk, Datadog, Cyberhaven, Absolute, Abnormal, Logikcull, Google Workspace, JumpCloud, DLP, ITSM, RMM/MDM, detection engineering, incident response, change management, Carbon Black, CyberArk, Aruba ClearPass, NIST CSF, ISO 27001, SOC 2, NERC CIP, GDPR, PCI-DSS.

Languages: Python, PowerShell, Bash.

EXPERIENCE

BEYOND FINANCE

Security Operations Engineer | 2026 – Present

- Scaled email review coverage from 500 to 6,000+/day and cut daily triage from ~5 hours to 15-minute runs by automating archive exports (body, attachments decoded to readable files), with orchestrator agent sending emails to specialized agents: personal addresses, unknown free mail, quarantined, etc.
- Architected a multi-layer offboarding lockdown that leaves zero company data access after termination, including on devices that never come back online.
- Recovered 150–200+ analyst hours per month by scaling an agentic DLP pipeline that triages alerts, reviews high-risk user activity, and drafts exec-ready incident reports, increasing coverage and time savings while improving MTTD and MTTR; 300+ reports generated, cutting draft time from ~60 minutes to under 10 each.
- Made AI triage safe to act on with a success measurement strategy (catch rate, noise ceiling): evals on every agent, HITL review loops for continuous tuning, and data pulled through a secure least-privilege integration layer (API connectors, MCPs, OAuth, managed secrets).
- Promoted from Information Security Analyst to Security Operations Engineer in nine months; own the team's DLP program, escalation paths, and severity standards, serve as incident commander, and partner with leadership, HR, and Legal to drive incidents to completion.
- Automated High Risk User reviews by orchestrating iPaaS workflows and AI system reviews, replacing lengthy manual risky-user reviews with analysis of SIEM alerts, data movements, and targeted AI email review wrapped up into structured reports.

EXELON

Cybersecurity Analyst | 2023 – 2025

- Built Splunk SPL queries and dashboards for real-time endpoint and network traffic monitoring;

- performed Carbon Black policy path tuning to reduce false positives.
- Assisted cross-functional teams during security incidents, using Splunk, CyberArk, and Carbon Black for threat detection, log analysis, and response; documented and escalated findings to senior analysts and stakeholders.

EDUCATION

B.S. Cybersecurity, Bellevue University (NSA CAE-CD), 2023, GPA 4.0
JOLIET JUNIOR COLLEGE | A.S. Cybersecurity | 2021
